SUMMARY

Computer Science graduate with a concentration in Cybersecurity and hands-on experience with Python development, automated data processing, software testing, Git version control, and cybersecurity projects. Experienced in developing technical solutions using Python and Jupyter Notebook, processing complex datasets, and collaborating on application development and security-focused projects. Seeking an entry-level opportunity in cybersecurity, software development, IT, or technical support where strong problem-solving, programming, and analytical skills can contribute to organizational goals.

EDUCATION

Kent State University

Bachelor of Science in Computer Science, Concentration: Cybersecurity

May 2026

EXPERIENCE

Technical Research / Software Development Experience

May 2025 – August 2025

Kent State University — Earth Sciences

- Developed and utilized Python-based tools to support processing and analysis of large-scale scientific image datasets.
- Automated image preprocessing workflows using custom Python utilities, improving consistency and efficiency in data preparation.
- Processed multispectral imagery captured by MicaSense RedEdge and Altum sensors using Python and Jupyter Notebook.
- Utilized Git for version control and collaborative code management.
- Created and executed software tests using pytest to validate code functionality and identify potential issues.
- Managed development and data-processing environments using Conda.
- Collaborated with team members to troubleshoot technical challenges involving code, data, and image-processing workflows.

Campus Road Supervisor — Part-Time

June 2024 – Present

PARTA

- Coordinate and dispatch campus and county bus routes while responding to real-time operational issues.
- Monitor road and route conditions to support safe and efficient transportation operations.
- Investigate incidents involving vehicles and passengers and document relevant information.
- Communicate with drivers and team members to resolve scheduling, safety, and service issues.
- Make time-sensitive decisions in a fast-paced environment while maintaining safety and service standards.

Campus Bus Driver — Part-Time

December 2023 – June 2024

PARTA

- Safely transported students and faculty while maintaining established schedules and transportation procedures.
- Performed routine vehicle and safety checks and reported potential operational concerns.
- Delivered reliable customer service while responding professionally to passenger questions and unexpected situations.

Camp Counselor

June 2023 – August 2023

Valley View Community Center

- Supervised children during daily programs, activities, and field trips while maintaining a safe environment.
- Resolved conflicts and communicated effectively with participants, families, and team members.

- Supported organized recreational programming and daily activity coordination.

Crew Member

June 2020 – June 2021

McDonald's

- Worked effectively in a high-volume, fast-paced team environment.
- Maintained quality and safety standards while balancing multiple responsibilities.
- Demonstrated reliability, teamwork, and composure during high-demand periods.

PROJECTS

PANDATA — Project & Financial Management Application | Capstone Project

- Collaborated on the design and development of an application created to help consultants manage multiple projects across different organizations.
- Developed functionality for tracking project financial information, deadlines, due dates, and project milestones.
- Designed views allowing users to evaluate project information by individual company or across a global project timeline.
- Applied software development, problem-solving, and collaborative programming skills throughout the application development lifecycle.
- Participated in application planning, development, testing, and refinement as part of a collaborative capstone team.

AI-Assisted Email Security Analyzer | Cybersecurity Project

- Collaborated with a faculty member and fellow student to develop a security-focused application designed to identify potentially malicious email content.
- Integrated the application with Mozilla Thunderbird to analyze emails with user authorization.
- Developed functionality to evaluate email content for potential security threats, suspicious links, and other indicators of malicious activity.
- Implemented a risk-rating concept designed to help users determine whether interacting with links or content within an email may present a security concern.
- Applied cybersecurity principles, threat analysis, programming, and collaborative development throughout the project.

TECHNICAL SKILLS

Programming & Web: Python, C++, JavaScript, HTML, PHP, R

Development Tools: Git, GitHub, VS Code, Jupyter Notebook, pytest, Conda

Cybersecurity & Networking: Cisco Packet Tracer, Network Fundamentals, Capture the Flag (CTF), Email Security Analysis

Additional: Data Processing, Automated Testing, Software Development, Troubleshooting, Technical Documentation

CYBERSECURITY INVOLVEMENT

HacKSU — Kent State University Member - Participate in cybersecurity Capture the Flag (CTF) competitions and hands-on security challenges. - Attend technical workshops, guest speaker sessions, and events focused on cybersecurity, programming, networking, and communications. - Build practical cybersecurity knowledge through collaborative problem-solving and technical exercises.
